1. This office action, in response to the pre-appeal decision mailed 8/31/2009, is a non-final office action.

Response to Amendment

2. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over the instant application's disclosed prior art.

Regarding claims 1-13, page 2, lines 13-21 of the instant application's disclosed prior art describes an ADSL system and central office that performs spectral management under the requirements of Annexes A and C of the G.992.1 Recommendations (page 3, line 27 to page 4, line 20). The standards incorporated by reference in the instant application's disclosed prior art further describe this system. Page 4, lines 8-20 states the ADSL system will manage the power spectral density about the POTS frequency band. Break points are stored in the system to allow the management of the power density spectrum. Annex A of G.992.1 specifies a PSD mask

for overlapped spectrum operation as well as a PSD mask for non-overlap spectrum (page 18, lines 19-23). Page 18, lines 14-24 discloses the current standard specifications disclose the PSD masks can be changed to different masks to improve the system performance. The prior art discloses the example of using the mask of Annex C may use the same masks as Annex A. As stated above, the prior art discloses an ADSL system and central office operator. The prior art discloses the capability of changing the mask used (such as the mask shown in figure 3 of the prior art) to a different mask and that the PSD mask depends on the equation used as shown in equation 1. The result of using different PSD masks would have yielded predictable results. Therefore, it would have been obvious for one of ordinary skill in the art at the time of the invention to provide this simple substitution of changing the PSD mask with certain break points to a PSD mask with different break points since the operators will operate in substantially the same manner and will yield the same result. The rationale to support a conclusion that the claim would have been obvious is that a particular known technique was recognized as part of the ordinary capabilities of one skilled in the art. One of ordinary skill in the art would have been capable of applying this known technique to a known device that was ready for improvement and the results would have been predictable to one of ordinary skill in the art.
